- CONCLUSION

## INTRODUCTION

- A Zoo Management System (ZMS) is essential for efficiently organizing and running a zoo's operations.
- This system ensures proper care of animals, smooth visitor experiences, and effective resource allocation.
- This system integrates comprehensive animal records, exhibit management tools, and staff scheduling capabilities to ensure optimal care and management of the zoo's diverse species.

## PROBLEM STATEMENT

The existing zoo management system faces challenges such as outdated technology leading to inefficiencies in animal record management and exhibit monitoring. Safety protocols may be insufficient, compromising animal and visitor security. Overall, the system needs upgrading to improve operational efficiency, enhance visitor experiences, and ensure comprehensive animal welfare and conservation efforts.

# **EXISTING SYSTEM**

- The existing system leads to inefficiencies in animal record management and exhibit monitoring. As they often relies on manual processes, making it is time-consuming and prone to human errors.
- This traditional approach lacks the efficiency and precision that an automated system can provide.
- Zoo Management System (ZMS) offers a modern alternative, introducing a dynamic and intelligent solution to enhance the overall resource allocation process.

# PROPOSED SYSTEM

- The proposed system helps the Zoo's Management to efficiently allot animals their place and record their health on a regular basis.
- Leveraging advanced algorithms, it ensures a fair and optimized resource allocation.
- The system introduces features like intelligent matching, considering animal preferences and expertise, leading to a balanced workload distribution.
- This automated approach enhances efficiency, reduces manual errors, and provides a seamless experience for effective collection of animal records, exhibit management tools, and staff scheduling capabilities to ensure optimal care and management of the zoo's diverse species.

## REQUIRMENT SPECIFICATION

## **FUNCTIONAL REQUIREMENTS**

- Animal Records: Maintain detailed records of each animal including species, age, medical history, diet, habitat requirements, and any special needs.
- Visitor Management: Track visitor information, manage visitor flow, and ensure a safe and enjoyable experience for all guests.
- Enclosure Management: Track which animals are housed in which enclosures, their grouping, and ensure appropriate space and environmental conditions.
- **Health Monitoring:** Record health checks, vaccinations, treatments, and medical histories for each animal.
- Feeding Schedules: Manage feeding schedules and dietary requirements based on individual animal needs.
- Scalability: Ability to scale the system as the zoo grows in size or complexity.

## **NON - FUNCTIONAL REQUIREMENTS**

### SOFTWARE REQUIREMENTS

MySQL - For back-end (to store databases).

HTML, CSS, PHP - For front-end design.

XAMPP server to establish the connection between front end and back end

#### HARDWARE REQUIREMENTS

Processor: Core i3 Processor or above

RAM: 4GB or more RAM

Hard disk: 512GB or more Hard Disk Drive (HDD)

## SYSTEM DESIGN

## **SNAPSHOTS**

#### **Welcome to Zoo Management System**

The Mysore Zoo, also known as Sri Chamarajendra Zoological Gardens, is one of the oldest and most popular zoos in India, Established in 1892, it spans over 250 acres and is renowned for its meticulous planning, cleanliness, and conservation efforts. The zoo houses a wide variety of exotic and endangered species from around the world, making it a significant center for wildlife education and conservation breeding. Located in Mysuru, Karnataka, it attracts numerous visitors with its diverse animal exhibits and lush, well-maintained grounds

## CONCLUSION

- A comprehensive Zoo Management System (ZMS) integrating animal care, visitor management, staff management, financial oversight, conservation, and educational programs is crucial for efficient operations.
- This system enhances animal welfare, visitor experience, and staff management while ensuring financial stability and supporting conservation initiatives.
- By integrating data and fostering informed decision-making, the system promotes the zoo's mission of wildlife preservation and public education, contributing to its long-term success and sustainability.
